GROOVE PANELS

Artiem Groove Panels are engineered to deliver a refined balance of acoustic performance, architectural detail, and long-term durability. Designed for commercial, hospitality, education, healthcare, retail, and premium residential applications, the Groove range gives architects and builders a versatile wall and ceiling solution—enhancing sound control while introducing a distinctive linear expression.

Defined by precision-machined grooves, each panel creates depth, rhythm, and shadow that elevate interior surfaces with a clean, contemporary aesthetic. The range is available in two clear categories—Groove Acoustic (AC) and Groove Solid (SO)—allowing the same design language to be specified for different performance needs. Acoustic configurations utilise a perforated substrate to support sound absorption, while Solid configurations use a full substrate for a robust, visually consistent finish.

Offered across multiple groove depths and base thicknesses, Artiem Groove Panels integrate seamlessly into broader interior systems, supporting design flexibility without compromising performance. Manufactured to strict quality standards, the range is developed to support reliable installation, consistent detailing, and specification confidence across a wide range of environments—whether used as a feature surface or as part of a complete architectural scheme.

Engineered for clarity. Designed for precision. Built for architecture.

MELAMINE

Artiem Melamine surfaces provide a reliable, design-consistent solution for interior applications that require durability, ease of maintenance and cost efficiency. Available in the Laminex Fireguard Decor Range or in decorative melamine from an approved manufacturer, each panel offers a uniform aesthetic with stable colour and texture across large installations.

A range of edge detailing options allows for seamless integration into joinery and wall systems. Panels can be finished with matching ABS edging for a refined, cohesive look, or supplied with a raw edge for custom fabrication and on-site processing.

Engineered for performance and versatility, Artiem Melamine is ideal for commercial, educational, hospitality and residential environments where both practicality and visual harmony are essential.

PLYWOOD

Artiem Plywood panels offer a warm, natural aesthetic combined with the strength and stability required for contemporary interior applications. Finished with a clear polyurethane coating—available in high or low sheen—with a low-VOC water-based finish, each panel highlights the unique grain and character of the timber while ensuring long-term durability and easy maintenance.

A range of custom stains is available to suit specific design palettes or to match adjacent materials within the project. Edge detailing can be completed with matching timber edge tape for a seamless architectural finish, or supplied with a clear sealed for fabrication flexibility and design-driven expression.

Engineered for consistency and visual refinement, Artiem Plywood is ideal for commercial, hospitality, education and premium residential environments where natural texture, warmth and performance come together to elevate interior spaces.

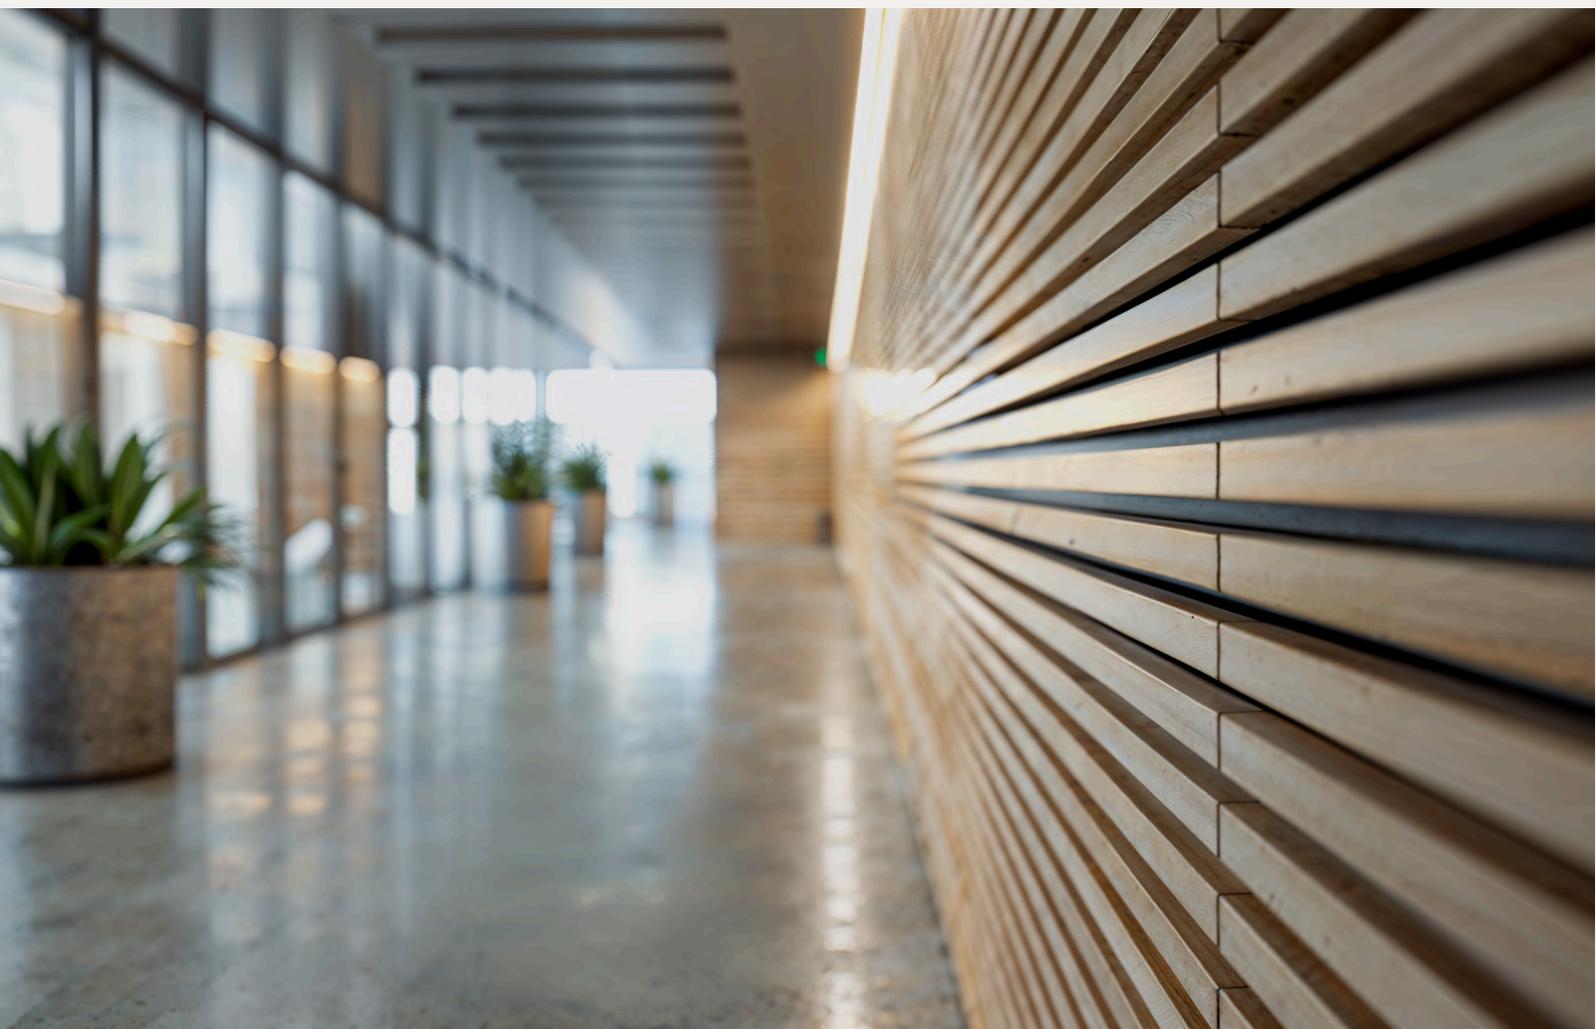

NATURAL TIMBER VENEER

Artiem Natural Timber Veneer panels showcase the authentic warmth and character of real timber, offering a refined architectural finish with superior visual consistency. Each panel is available with a clear polyurethane coating—offered in high or low sheen—or a low-VOC water-based finish that enhances the natural grain while maintaining durability and environmental performance.

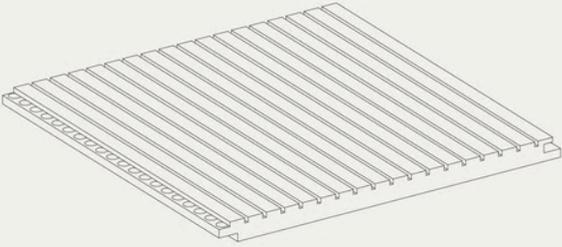

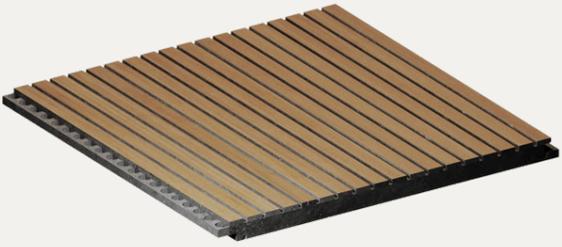

A selection of custom stains allows the veneer to be tailored to specific design palettes, ensuring seamless integration across interior elements and project requirements. Edge detailing can be completed with matching timber edge tape for a clean, cohesive appearance, or supplied with a clear sealed for bespoke fabrication and design flexibility.

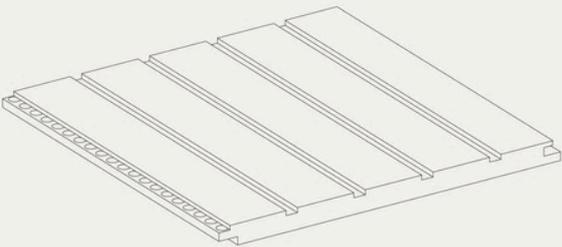

Crafted for projects that demand natural materiality and premium craftsmanship, Artiem Natural Timber Veneer brings warmth, depth and sophistication to commercial, hospitality, education and high-end residential interiors.
